

AVIATION TECHNICIAN

Summary

I have grown up with a maintenance background having always worked on my own vehicles and equipment. I started my professional career in automotive as a lube technician, I quickly was moved into a technician role and was factory trained on Mitsubishi automobiles. Once completing the Aviation Maintenance Technician Airframe and Powerplant licenses, I started working for SkyWest Airlines and was trained on maintaining commuter aircraft. At this time I completed an Associates of applied science in aviation technology. I have always been interested in working professionally on helicopters and got the opportunity to work on EMS helicopters for Air Methods. Air Methods provided me with factory training on Bell Helicopters and Airbus Helicopters among other training opportunities.

Highlights

- Dedicated worker
- Driven individual
- Works well in group situations
- Willing and able to lead or train others
- Thorough troubleshooting
- Problem solving
